offline 설치시 docker repo 비활성화

offline 설치할때 docker repo가 자동으로 활성화 되는데 이것을 방지하기 위해 enable_docker_repo 속성을 globals.yaml 에 추가해준다.

```
#####  
# Docker options  
#####  
  
# Custom docker registry settings:  
enable_docker_repo: false  
docker_registry: "registry:5000"  
# Please read the docs carefully before applying docker_registry_insecure.  
docker_registry_insecure: true  
#docker_registry_username:
```
